

### Shelves

A&G Technologies Shelves are an easy solution for storing things that aren't rack mountable. The shelves attach to the rails; servers or other equipment sits on the shelves. Make sure the shelf has the weight capacity you need—some can hold hundreds of pounds. For easy access to components in your cabinet, choose a sliding shelf. There are also vented shelves that improve air circulation within the cabinet.

### Caster Wheels

casters are a great solution for data centers and server racks. A&G Networks line of casters are a prime solution for server rack casters because they dissipate electrostatic energy. Electrostatic dissipative material is not anti-static, nor is it conductive.

### Ventilation Fans

Ventilation in your cabinets is critical for keeping vital equipment cool. An enclosure blower draws cool air from a raised floor at the bottom of the cabinet and delivers it right across the front of servers or other network components.

Single Fan 230V

### M6

M6 rails so popular on server cabinets? They're adaptable. With just one cage nut, you can change a square hole into a round one. That gives you much more versatility in your equipment and mounting choices.
